

Model 922 Remote Drive-Thru System

ComCo's New 922 unit provides a drive-thru system for fast and easy customer transactions.

Model 922 Remote Drive-Thru System

4" x 7" clear tube provides less obstruction between operator and customer

Touch sensitive switches provide a weatherproof environment for electrical components and an exceptionally long switch life

Powder coated finish provides environmental durability and long-term product beauty

Optional Customer Video Module with high contrast 10" LCD Monitor

The innovative audio design filters background noises enhancing only voice frequencies.

TRANSPORT COMMERCIAL OR RETAIL TRANSACTIONS WITH ONE SIMPLE, FAST AND ECONOMICAL SYSTEM

ComCo Systems has stepped into the lead once again with the development of the all NEW 922 drive-thru system. The system has been developed to deliver a 4" x 7" carrier to one of our many different types of operator units including the NEWEST "Doorless Chute designs" from ComCo.

The exciting NEW 922 design introduces a new form of carrier presentation to the 900 Series of Customer units. The familiar "Tip Tube" that has served so well in the early 900 series will be replaced on the 922 with a method of delivery that has been proven by years of reliability in our Point-to-Point systems.

This new and innovative design also permits the blower system to be located anywhere in the canopy or a remote location away from the operator station. The importance being a virtually quiet operation and should maintenance ever be required, service can be provided without inconvenience to company personnel.

- **Faster air system increases productivity and customer satisfaction. The ComCo 922 system can transport two transactions by the time a slow, mechanical conveyor can transport one.**
- **Easy to operate with touch sensitive "CALL" And "SEND" switches for weatherproof environment.**
- **The ComCo 922 modular design enables easy maintenance and service if ever needed.**
- **A unique patented blower design makes it possible to power remote locations up to 500 feet away.**
- **Optional, New slim line Customer Video**

* Integrated audio and video communication systems available with all packages.

Integrated Solutions is ComCo's exclusive series of modular products that seamlessly integrate into a highly-productive backroom teller center.

*Equipment design subject to change without notice.

INNOVATION AT WORK.

Model 922 Remote Drive-Thru System

Integration At Work...

The NEW 922 system combines versatility and function. By using a removable carrier, the Model 922 has a much faster speed of operation than some retail units that use a stationary carrier and track system. It can transport two transactions by the time a slow, mechanical conveyor can transport one.

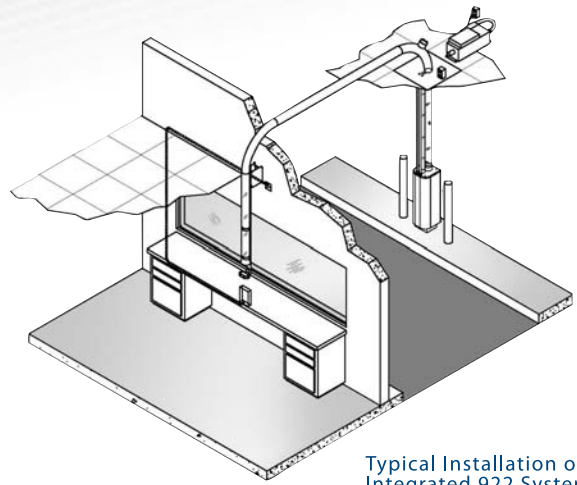

The 922 drive-thru system has been developed to deliver a 4" x 7" carrier to one of our many different types of operator units including the NEWEST "Open Access Chutes" from ComCo. With this patented ComCo design, open chutes are used instead of the larger units that blocked so much of the Operator's view. The open chamber chutes are designed with a minimum of view obstructing material along with clear 4" x 7" tubing allowing for almost no visual obstruction between the Operator and their customers.

This exciting, innovative and NEW design permits the blower to be located outside in the canopy or in a remote location. It no longer needs to be installed near the drive-thru operator unit. This innovation does two things. First, it provides a quiet environment for the operator. Secondly, should maintenance ever be required, most service can be provided without staff inconvenience.

Model 922 Customer Unit

At last there are "Open Access" operator terminals for your pneumatic tube delivery system that eliminates doors at the Operator Station. ComCo's open chute design now delivers carriers with speed, convenience and full access to the carriers from all sides.

- The 4" x 7" chutes require the smallest area above the counter top compared to most other operator systems.
- The ComCo line of chutes with the blower support system is the only system in the industry that provides a "controlled entry" all the way to the arrival pad.
- "Controlled Entry" provided by our unique blower system provides a soft landing for the carrier and totally eliminates the need for an additional "Gate" in the system.
- Simplified "Send & Recall" touch-sensitive switches provide an exceptionally long switch life.

Integrated 922 System

Unique Carrier Design

Our research shows that most commercial transactions average less than one pound yet they are too bulky to fit into a small 4" or 4 1/2" retail carrier. The unique ComCo 900 carrier design allows for easy insert and retrieval of bulky transaction by customers and operators. The carrier is light weight, fully accessible and easier to use than the small retail carriers and can hold 3 times the load. They are constructed in such a way that it provides a handy flat writing surface for customer use.

Model CCS 1561 Audio/Video Station

Optional Audio/Video Station for 1 to 16 lanes provides exceptionally clear audio and video with a high contrast 6.4" color LCD Monitor

*Equipment design subject to change without notice.
