

ATM Raminator®

As criminals become more creative, new methods and tools must be used to protect people and assets. ATM Raminator gives the advantage back to you. Our patented technology hinders ATM removal by brute force. This very same technology will provide protection for safes and a variety of other security containers. Consult your ATM Raminator dealer for details.

In days past, the theft of an ATM was relatively simple. Criminals could net a large reward in seconds by using methods like chain pull-out, prying, and vehicle attacks, to name a few.

Typical ATM anchoring bolts fail due to the attack energy forcing the base concrete to shatter. The ATM Raminator product line is designed to absorb and redirect any "attacking force" using its patented technology*. Expecting an easy heist, thieves get confused. They leave the site realizing the ATM cannot be quickly dislodged.

Easily enhance your ATM security now!

ATM Raminator...
...we anchor your assets!
