

- Millenium Expert
- Millenium Enterprise
- Millenium Xtra

Application

The Millenium Badge Module allows you to capture and create your own photo ID badges. It consists of several options to fit your needs such as a software-controlled digital camera, a high-end imaging capture card and a signature pad. Badges can include a bar code, digital signature or magnetic stripe encoding compatible with Millenium or stand-alone electronic access control systems. Combine workflow for User File, Camera Control, ID Card and Badging Operations.

Features

- Fully integrates with Millenium Enterprise or Expert
- Simple process of photo capture, badge printing and user file management
- Increase facility security
 - Quickly supply badge cards to visitors or replace lost or forgotten employee cards
 - Real time display of user photo when access is granted or denied
- Powerful badge layout editor
- Customize the card to meet your different security needs
 - Prevent duplication
 - Print different color backgrounds for different access levels
 - Encode and read magnetic stripe, Wiegand, bar code and other technologies

PC Requirements

- Intel Core
- RAM: 4GB
- HD: 50GB
- CD/R-W
- Serial port DB9
- Screen Resolution: 800 x 600
- Parallel (LPT) Printer Port for Security Key

Software Requirements:

- Millenium 2.5 / expert or Millenium Enterprise software application
- Windows XP and above

- Millenium Expert
- Millenium Enterprise
- Millenium Xtra

System Management

User Friendly:

- Easy to use graphical user interface
- Simple card layout
- Drag and drop placement of graphic elements
- Includes static and variable text

Network Support:

- Multiple workstations
- Peripherals including Signature Pads

Password Protection:

- Assign each operator a security level to protect user information

Badge Creation History:

- Automatic history of Badge capture date, Badge print date and Badge print count

Remote Camera Control:

- Zoom or Auto-center portrait with keyboard or mouse
- Color, brightness, contrast and white balance remotely adjusted
