

Application

A highly advanced access control software system, Millenium Xtra runs directly from your browser. This means that the complete suite of access control functions is managed without needing specialized client software on local machines.

Any alarm event can be sent automatically to your text-enabled cell phone, PDA or e-mail address. Highly secure communication protocols and 128 bit SSL encryption options ensures access for authorized company security personnel only.

Yet for all its ease of use and user-friendly applications, Xtra is tremendously powerful, designed to deliver secure access control across an entire multibuilding enterprise.

System Features

- Industry leading hardware with modularity for flexible, reliable solutions
- Data import/export capabilities
- Real-time event monitoring
- Multiple simultaneous users/operators
- E-mail/WAP alarm notification
- Report scheduling via e-mail
- Web page administrative changes
- True distributed processing
- Unlimited access levels
- Workstation licenses not required
- ID Badge option
- Reports automatically sent via email
- Hardware and host I/O linking
- UDF import option can be automated
- Single or block card entry
- Zoned antipassback
- Supports all popular card technologies
- Supports biometric technologies, Including facial recognition
- User defined data fields
- 200 time zones each with four intervals
- Fips 201 compliant
- CCTV
- Single card swipe lockdown feature

Server Requirements

- Call for up to date Server specification
- Pentium i3 or better
- Windows 2008, XP or better
- MS Internet Explorer 8 or later, Firefox 9, Chrome, Safari
- Internet connection recommended

System Capacities

- System Software: Unlimited users
- Each Site Control Unit: 100 access readers, 10 Relay Output boards
- Each system: 1,000 site controllers
- Number of partitions: Unlimited
- Number of Access Groups: Unlimited
- Time Zones: 200 each with 4 intervals
- Holidays: 20 with capability to delete after date
- Vacation Periods: 8 with start-end times

System Management

Millenium Xtra includes the access control hardware, access control application and a Web browser. The intelligent controller hardware with the software application over TCP/IP, through the internet/intranet, or a wireless connection. By utilizing true distributed processing the intelligent controller can determine who can and who cannot access a door.

It is also extremely flexible. A system can support from 1 to 100,000 doors. Additionally, a number of useful reports can be produced in ways suitable to each customer's needs. The design allows for easy integration to any company HR database or university one-card systems. For a large corporation or university, the proven technology of Xtra is the ideal solution.

General Capabilities

System Administration:

The administrator sets up the system to be used on a daily basis. The administrator can add other users and assign them privileges, i.e., authority to perform specific functionality throughout the system.

Event Monitoring:

The user will monitor the facility by responding to alarms, monitoring and controlling doors, and viewing cardholder activity. Although Xtra monitors a facility continuously, a user must have his web browser up and be logged into the Xtra system to receive notification messages (with the exception of those explicitly routed to a pager or email).

Cardholder Data:

The user can manage all of the cardholder records in their system. Users can add, delete, and modify cardholder database records. They can also generate cardholder data queries for downloading or printing.

Reports:

The user can run and schedule reports of information about the system as well as event and alarm activity.

How to Order

Part Number	Description
135-101888-016	Millenium Xtra 16 doors
135-101888-032	Millenium Xtra 32 doors
135-101888-064	Millenium Xtra 64 doors
135-101888-128	Millenium Xtra 128 doors
